

Octopus USB Controller

Control & Configure USB Devices

Features:

- Compatible with virtually all commonly marketed hand-held USB microphones, foot pedals, and keypads
- “Auto-learn” functionality to recognize new devices
- No limit to number of simultaneously connected devices; can use several simultaneously

Programmable behavior:

- Open any program, document or folder
- Insert boilerplate text
- Emulate any keyboard key or key combination
- Activate any Dragon NaturallySpeaking command or hot-key
- Combine sequential actions into a single script

Licensing Information: a buyer is entitled to use on two computers for a period of two-years and is allowed unlimited application upgrades and on-line support.

Compatibility: Windows XP, Vista, 7, & 8

A single application to control all of your USB Human Interface devices!

For the first time, a single software utility allows you to configure and control ALL USB Human Interface Devices (HID) on a Windows-based computer ... and with amazing simplicity. Whether the onboard keyboard, a USB keypad, a hand-held USB microphone, or a USB foot pedal, **Octopus USB Controller** (OUC) allows you to assign behavior to any button, key or pedal lever on one or several devices. Commonly performed actions can now be reduced to a single action—improving efficiency and saving you both time and money.

Learn more about OUC or download a free trial version at www.YourWebSite.com or visit us using the information to the right. Whatever your situation, you will find **Octopus USB Controller** a huge time-saver.
